

Introduction to content parts

from 1.2.9 and above

Head area

All content types have the following setting possibilities:

In the head area you will find the following setting possibilities.

Head area of content type / content part

» Field descriptions

category	Press  to go to the site structure of this article. Also look for Create / Edit Site Structure
Article title	Press  to go to the site article title of this article. Also look for Create Article

Important: When you use one of the links at **category** or **article title** before you have saved the used content part, the changes get lost.

Content type	Here you choose the content type / content part that you want to use.
--------------	---

Important: NEVER change the content type / content part when you already have inserted content. It doesn't matter whether it was saved or not, because the content will be deleted. When you want to change the content type, copy the whole content, then change the content type and paste the content again.

Output	here you can say in which area the content part will be shown.
--------	--

You have the following possibilities:

Main Block(CONTENT)
Left(LEFT)
Right (RIGHT)
Header (HEADER)
Footer (FOOTER)

Space before / after	Here you can define a space between the actual and the following content block / content part.
----------------------	--

Top-Link	Here you can show a link to the begin of the article.
----------	---

Result: [^TOP](#)

The graphic can also be changed. You can find it

in

/img/article/top_link_0.gif

Anchor

Here you can set an anchor, that means you can directly link to a content part.

When you have set a check here, the following code fragment will be generated: XXX is the ID of the content part.

How can you see the ID of the content part? You can find it here:

[The article center in detail](#)

To call an anchor in an article, please use one of the following possibilities:

1. Anchor inside of an article

Insert the following link: [Linktext](#) XXX will be replaced with the ID of the content part.

2. Anchor in an other article

Insert the following link: [Linktext](#)

In this case "**Alias**" will be replaced with the structure name in that the article is located and xxx will be replaced again with the ID of the content part.

the second example has been used at "The article center in detail".

Notice: Please note that
#cpid is always written
small.

Sort. Value	
Content title	Content title of the actual CP
Sub title	Sub title of the actual CP

[^TOP](#)

Footer

View to a newly created content type / content part

In the footer you can find the following settings and change possibilities or buttons.

Footer of the content type / content part

Footer

» Feldbeschreibungen

Status	Here you can decide with a check whether the CP is visible for the visitor or not. checked = CP visible unchecked = CP not visible (Standard)
Create	The CP will be created, but you can continue to work with it.
Save	The CP will be created, but the View will be closed and you will jump to a summary of all CPs in this article.
Cancel	The CP will be closed without savings.

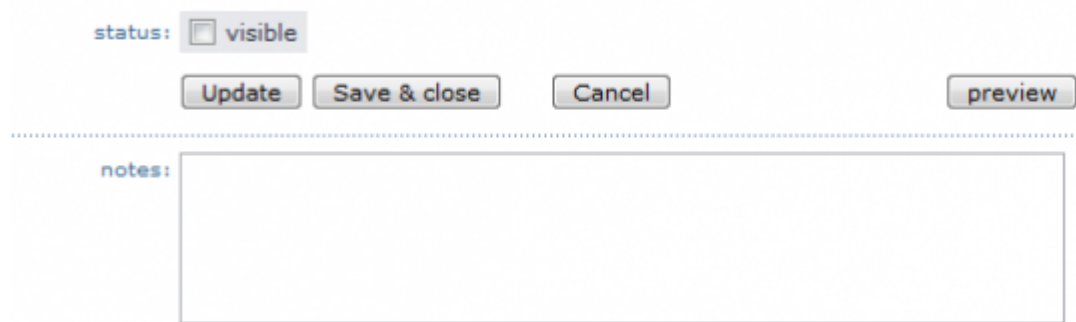

Notice: All already inserted data will be deleted.

[^TOP](#)

Footer

View to a already created content type / content part

The view differs at a new created content type / content part as follows.
In the footer you can find the following settings and change possibilities or buttons.

Fusszeile des Inhaltstyps / Contentparts

» Field descriptions

Status	here you decide whether the CP is visble for the visitor or not checked = CP visible unchecked = CP invisible (Standard)
Actualize	The changes will be saved and you can continue to work in this view.
Save	The changes will be saved and the view will be closed. You are going back to the CP overview.
Cancel	The CP will be closed without savings.
	Notice: Alle inserted changes will be deleted.
Preview	Pressing this button shows the actual area as shown to the visitor.
