

## Content Part "Ext. Content"

With this content part it's possible to view your own created HTML in a phpWCMS installation.

**source:** Here you can choose from one of the following options:

- 1. file from structure:** If you want use html files that you have uploaded to the *content/pages* folder choose this option
- 2. custom path/file or URL:** Use this option if the page you want to view is outside of your phpwcms installation.

**file/URL:** If you choose the **custom path/file or URL** option you can insert here the whole path to the file you want to display. e.g. `http://your_domain.com/file.html`

**select file:** You can upload your own html files into the *content/pages* folder. You can also create the folders. All folders / files you will see in the *select file* field below. You can choose them by setting the dot in front of the file.

**URL:** [http://www.phpwcms-docu.de/index.php?content\\_part\\_external\\_content](http://www.phpwcms-docu.de/index.php?content_part_external_content)
