

# Sitestructure

## set-up and administration

### Introduction

phpwcms enables your to set up your entire site structure by adding different categories to a tree structure. After logging into phpwcms, clicking on ADMIN will take you to the site structure overview. After installing phpwcms you will find only one entry: „Home“, which is your home page. On the right you will find 6 icons that help your to edit your site structure.

### Note

Disabled icons are displayed faded like this  
. However, this is mainly the case for the Home category. „**Home**“ cannot be deleted, therefore is not available for this item.

#### Legend

<u>Icon</u>	<u>Description</u>
	Add a new category to the site structure
	Cut the category and paste it at a different place
	Copy and paste the entire category (available only with <a href="#">updated</a> version 1.1- RC4 27.08.2004_A, including Patch 1 and Patch 2)
	Edit existing category.
	Move category up or down within the site structure.
